FBC Presents

Cross Domain Technical Forum (CDTF)

Date/Time: June 25-27, 2024

Johns Hopkins Applied Physics Laboratory-Kossiakoff Center, Laurel, MD

General Information

The National Cross Domain Strategy & Management Office (NCDSMO) presents the 2024 Cross Domain Technical Forum (CDTF), a three-day forum for government, industry, and FVEY partners to advance their cross domain knowledge, learn about the latest developments in cross domain technology, and discover cross domain solutions (CDS) that will satisfy their mission needs.

Over the past decade, the CDTF has connected representatives from government and industry helping them partner and collaborate on the advancement of cross domain technology and the resolution of challenges specific to cross domain developers, testers, owners, and operators.

The CDTF is for those who work with cross domain technology for the U.S. Government (particularly the Department of Defense and Intelligence Community), Five-Eyes partners (Australia, Canada, Great Britain and New Zealand), industry, and academia.

Anyone involved in the development, testing, accreditation, operation, maintenance, or management of CDSs and anyone who needs to know more about CDSs to accomplish their mission should attend.
